Density-optimal and dynamics-safe selectors occupy different regimes
dynamically unsafe: $\gamma_\sigma/\gamma_{CIC} < 0.90$
measured smoothing frontier
CIC
Silverman, $\sigma = 5.819\,\Delta x$
MISE, right-censored
LOO-CV, right-censored
dynamics selector, $\sigma = 0.184\,\Delta x$
mode killed; $\sigma \geq 60\,\Delta x$
MISE and LOO-CV coincide
growth window eliminated
Growth-rate fidelity, $\gamma_\sigma/\gamma_{CIC}$
Noise reduction, MISE(0)/MISE(σ)
