(a) weak Landau: measured pass budget
density-error power reduction
raw binomial
compensated $p=1, n=16$
Gaussian MISE optimum 16.62x
Gaussian C4 5.64x
rate C1 fails for $n \geq 8$
central ceiling
$n=12$
binomial passes n ($\sigma_{\mathrm{eq}} = \sqrt{n/2}\,\Delta x$)
(b) measured domain boundary
measured fidelity:
unsafe
measured σ_{CV}
cross-validated width / Δx
$R_\gamma = 1.690$ [1.377,2.075] at $\sigma = 6.61$
$R_\gamma = 1.048$ [1.047,1.049]
analytic ceiling 2.453 Δx
$R_\gamma = 1.031$ [1.031,1.032]
measured fidelity:
safe
perturbation amplitude α
