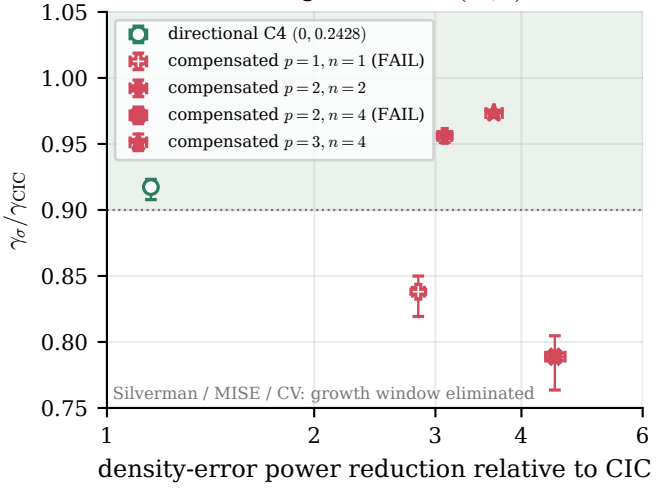
(a) weak Landau, $N_{\mathrm{ppc}} = 1024$
C4 Gaussian, $\sigma = 1$
Silverman, $\sigma = 1.833$
MISE, $\sigma = 6$
compensated $p = 1, n = 16$
compensated $p = 2, n = 4$
$|\gamma_\sigma|/|\gamma_{\mathrm{CIC}}|$
CI-supported fidelity band
density-error power reduction relative to CIC



(b) E2 near-marginal corner $(12, 1)$
directional C4 $(0, 0.2428)$
compensated $p = 1, n = 1$ (FAIL)
compensated $p = 2, n = 2$
compensated $p = 2, n = 4$ (FAIL)
compensated $p = 3, n = 4$
$\gamma_\sigma/\gamma_{\mathrm{CIC}}$
Silverman / MISE / CV: growth window eliminated
density-error power reduction relative to CIC
