(a) directly measured selector widths
LOO-CV right-censored at ≥ 60
σ_{MISE}
$\sigma_{\mathrm{LOO-CV}}$
MISE log--log slope $= -0.222$
analytic ceiling 2.453 Δx
selected width $/\Delta x$
particles per cell N_{ppc}
(b) resolvability vs fidelity, $N_{\mathrm{ppc}} = 4096$
CIC
C4
MISE
LOO-CV
more resolvable, less faithful
rate-safe band
rate error $|\gamma/\gamma_{\mathrm{th}} - 1|$ [%]
resolvable e-foldings
